RE: G90 Noise Reduction System

Dear Andy

The Gamesa G90 is equipped with a Noise Reduction System (NRS) that can be programmed to reduce the noise output of the turbine. This system allows the noise to be reduced based on various parameters including time of day, wind speed and wind direction.

The NRS is configured at the time that Gamesa commissions the Turbines and SCADA system at the initial start-up of the wind farm. The parameters of the NRS can only be changed by Gamesa technical personnel and requires the changes to be made physically at the project site. Any such change would be logged by the system and would be shown in any audit of the SCADA system.

If I can be of further assistance please do not hesitate to contact me.

Sincerely,

Andrew Lockhart
Head of East and South West Sales
